A Deadly Wandering Low Price CD: A Tale Of Tragedy And Redemption In The Age Of Attention

Synopsis

An ordinary Utah college student named Reggie Shaw fatally strikes two rocket scientists while texting and driving. Pulitzer Prize-winning New York Times reporter Matt Richtel follows Reggie from the moment of the tragedy, through the police investigation, the state's groundbreaking prosecution, and ultimately, Reggie's wrenching admission of responsibility. Richtel parallels Reggie's journey with leading-edge scientific findings regarding human attention and the impact of technology on our brains. Remarkably, today Reggie is a leading advocate who has helped spark a national effort targeting distracted driving, and the arc of his story provides a window through which Richtel pursues actionable solutions to help manage this crisis individually and as a society. A propulsive listen filled with fascinating scientific detail, riveting narrative tension, and rare emotional depth, *A Deadly Wandering* is an audiobook that can change lives and save lives. Read by Fred Berman

Customer Reviews

Matt Richtel is a Pulitzer Prize-winning New York Times reporter and bestselling nonfiction and mystery author. He lives in San Francisco with his wife, Meredith, a neurologist, and their two children. In his spare time, he plays tennis and piano and writes (not very good) songs. Visit him online at www.mattrichtel.wordpress.com.

Every parent, every teacher, every driver should read this harrowing tale. Richtel has written an eminently readable book; I read in one sitting. What sets the book apart however, is the inclusion of

the brain research and the scientific analysis of what goes on in our brains as we are driving...texting or not. We must address this problem and reading this book convinces us there is no time to waste.

Too much detail on research. It will completely explain something we all know that ; no one should text while driving!

Just finished reading this book about how our brains are getting overloaded by the "bells and whistles" of the digital communications era and affecting our ability to pay attention. A combination of the story of a student who causes a deadly accident by texting and driving and the neuroscience behind the deleterious influence of texting on his brain. I was more interested in the fascinating neuroscience so found myself skipping the young man's story (with its legal battles). The book goes beyond texting on how our brains are being affected by rapid, stimulating communications. Worth the attention of anyone who can tear themselves away from expecting "bells and whistles" on their phones and pads.

a gift to my brother , very good . comfortable,nice . It's a sharp and a very nice Chef product. quickly.
