A Field Guide To Insects Of America North Of Mexico (Peterson Field Guide Series, No. 19)

Synopsis

Detailed descriptions of insect orders, families, and many individual species are illustrated with 1,300 drawings and 142 superb color paintings. Illustrations - which use the unique Peterson Identification System to distinguish one insect from another - include size lines to show the actual length of each insect. A helpful glossary explains the technical terms of insect anatomy. --This text refers to an out of print or unavailable edition of this title.

Customer Reviews

Richard E. White is a research entomologist at the United States National Museum in Washington and the author of articles and research papers chiefly in his special field of beetles. As an artist he is most experienced in portraying insects, but he also illustrates general biological subjects. Donald J. Borror is a professor of entomology at Ohio State University and the author of books, articles, and recordings. With Dwight M. DeLong he is the coauthor of a widely used textbook, *An Introduction to the Study of Insects*, now in its fourth edition. Dr. Borror has made several records of bird songs and insect sounds. With Richard D. Alexander he recorded *The Songs of Insects*, one of the Sounds of Nature disks in the Cornell Laboratory of Ornithology series. Roger Tory Peterson, one of the world's greatest naturalists, received every major award for ornithology, natural science, and conservation, as well as numerous honorary degrees, medals, and citations, including the Presidential Medal of Freedom. The Peterson Identification System has been called the greatest invention since binoculars, and the Peterson Field Guides® are credited with helping to set the

stage for the environmental movement.

I love this guide. One of the best for insects, this definitely enhanced my learning experience in my entomology course. And now I find myself keeping this book in my bag everywhere I go. Really handy. With insects, you need to take a taxonomic approach to identify between families, this book lays out the differences for easier id. (In some scenarios a magnifying glass or dissecting scope is the most helpful.)

This was perfect for my 9-yr old in 4th grade. They were studying insects for this year and this gave him more than enough materials to build a realistic insect model. My son loved this book and read it avidly before building his insect model. Great purchase for us!

My girlfriend is studying to be a forensic entomologist and she had been wanting to purchase this book for awhile, so i ended up buying it for her birthday. She loves it and uses it in her studies. I would suggest the purchase for that bug enthusiast in your life.

Now I know what bugs me.

Not a bad book, but has line drawings rather than photos. Ordered in error, meant to order the National Wildlife Federation Field Guide to Insects. (Ordered that one, will return this one.)

Almost the whole guide is in black and white - not useful.

great reference book

This is a good field guide, but there are no color pictures, and the labeling system assumes that you already have a knowledge of the insect families. I bought this for an entomology class, but didn't use it once throughout the semester. I would recommend the Audubon guide (also available on) as a better alternative.
