Customer Reviews

I completely regret buying this book. There are many, many errors that are not acknowledged by the publisher on their official list of known errors. For the price, you would expect the book to have a minimal number of errors. However, literally each practice test in the book is riddled with mistakes. In each section you can expect there to be at least 3-4 typos per test that range from typos in answer choices to completely incorrectly drawn graphs to explanations that are outright wrong and ignore basic chemistry concepts like Le Chatlier's principle. Unless you already are a master at chemistry and are using this book just for extra practice, DO NOT buy this book. You'll spend more time working as an editor and trying to correct the book's mistakes when their editing team should've done so already. In reality, you'll end up worse off after using this book because there are often incorrect questions and explanations if you do not already have a good grasp of chemistry concepts.

I usually love ExamKrackers materials, but this is awful. It's filled with mistakes on nearly every page you turn, so unless you already know what you are doing and this is just a little boost to your score, I can't recommend it to anyone. Otherwise, I'd wait for the 2nd edition. Very disappointed.
