Customer Reviews

"The Vaccine Guide is an excellent resource, providing the latest, most up-to-date, unbiased information for parents and physicians as they make decisions on safe immunization practices." — Mary N. Megson, M.D., F.A.A.P. "Aside from diet and discipline, no other issue concerns parents more today about their children's health than the safe use of vaccines. The Vaccine Guide provides a clear, well-balanced, and thoroughly researched review of vaccine use. I strongly recommend it for parents and health care providers." — Robert Schiller, M.D.

loaded with info

Good information but not as comprehensive as I would have liked. It doesn't cover the HIB or PC vaccines, two other childhood vaccinations now on "the schedule". I'd love for that to be added in.

Great guide to the considerate mind that wasnt to look at each vaccine individually instead of steadfastly hodling to one camp or the other.

My wife and myself purchased this great little book after watching a YouTube video with Rob Schneider, who advised that people read this book. This is one of many reference materials that we poured over prior to having our little baby a couple weeks ago. We're thankful that there are good resources out there like this, for people who like to be knowledgeable and make good informed decisions for themselves and their families.

A great reference book of studies and information, to help all parents and adults make an informed decision on their health.

Good book, but was looking more for a book with the pros and cons. Liked the Dr. Sears book on vaccines much better. This covers a little more internationally requirements than the Sears book, if you want to know what some of the other countries are doing on this topic.

Was a little tough for me to read, just because of the nature of the content being somewhat detailed & trying to hold and weigh things that are new to me was challenging. The information was great though, and this became one of the trusted sources we used to make informed decisions regarding vaccines for our child.

Everyone should be well informed on BOTH sides of this issue. Unfortunately, if one ONLY listens to mainstream medicine, they're just getting a part of the story.
