Evidence-Based Geriatric Medicine

Synopsis

The latest addition to the Evidence-Based Book series, Evidence-Based Geriatric Medicine provides non-geriatrician clinicians an overview of key topics central to the care of the older patient. This guide focuses on the management of common problems in the elderly taking into account their life situations as well as treatment of specific conditions. Leading geriatricians with expertise in evidence-based medicine utilize the best available evidence and present this information in a concise, easy-to-use, question-based format. Evidence-Based Geriatric Medicine is a unique guide to the optimum management of older patients.

Customer Reviews

“This is a good book for lay caregivers and support personnel training to provide care, as it includes many options for consideration.” (Doody's, 10 August 2012)

Evidence-Based Geriatric Medicine provides non-geriatrician clinicians with an approach to topics central to the care of the older patient. These include the diagnosis and management of the geriatric giants (delirium, dementia, urinary incontinence and falls), pressure ulcers, elder abuse and end of life care. This new book in the Evidence-Based series includes specific age-related conditions while providing a holistic approach to the older patient. Geriatric Medicine specialists with expertise in both their specific topics as well as in evidence-based medicine present the best-available evidence in a concise, easy-to-use, question-and-answer based format. Each chapter includes common questions that are asked by clinicians, and the answers

focus on a systematic review of the evidence and conclude with a bottom line for clinical practice.

• A unique guide to the optimum care of older patients
Focuses on the best available evidence
Uses rigorous and transparent methods for seeking and appraising the evidence
Provides the evidence in a clinically useful format

This book is an invaluable resource for trainees and clinicians from various disciplines, worldwide. It addresses an issue of global importance – building the capacity to care for older persons.

Required reading for school course. Interesting information.

Book in excellent condition.

It's definitely evidence-based and interesting, however there is a lack of hands-on data, such as evidence-based guidelines. Anyway, I do like the book.

A good reference for treatment and assignment to help geriatricians and physicians. I recommend for rapid consult on day a day.
