# **Molecular Visions Organic Model Kit #3 [With Model PiecesWith Instruction Booklet]**

## Synopsis

Molecular models are as vital a tool for the study of chemistry as calculators are for the study of mathematics. Molecular Visions models may be assembled in infinite combinations enabling the user to construct not only familiar configurations but also undiscovered possibilities. Models are intended to inspire the imagination, stimulate thought, and assist the visualization process. They present the user with a solid form of an abstract object that can otherwise only be visualized by the chemist. While chemistry textbooks use letters and graphics to describe molecules, molecular models make them "real". MOLECULAR VISIONS Organic Kit #3 is in a corrugated box 6"x4.5"x3.5". Atoms may be put in the box without being taken apart.

## Book Information

Misc. Supplies

Publisher: McGraw-Hill Education; 1 edition (April 27, 2001)

Language: English

ISBN-10: 0964883740

ISBN-13: 978-0964883741

Product Dimensions: 6.7 x 1.7 x 10.4 inches

Shipping Weight: 8.8 ounces (View shipping rates and policies)

Average Customer Review: 2.8 out of 5 stars 15 customer reviews

Best Sellers Rank: #55,565 in Books (See Top 100 in Books) #121 in Books > Science & Math > Chemistry > Organic #306 in Books > Science & Math > Chemistry > General & Reference #355 in Books > Textbooks > Science & Mathematics > Chemistry

## Customer Reviews

Merril Darling is an experienced English teacher of many years. A practising teacher, Merril is an author of the popular Complete Comprehension series.

Bookstore at my school ran out of these, so I had to order these online. Nothing special, just cheaply made model for organic chemistry class use.

I needed help visualizing 3D changes in molecules for a 3rd year university level o-chem class. Molecular modeling kits are expensive, I chose this one because it's cheap. Pieces are hard to fit together, the male and female ends of components don't make any sense in relation to the female-only molecule pieces. I think I may have gotten a kit that was intended for different use than I

was looking for, but there was nothing in the item description to tip me off.

Be careful buying this product! What is pictured is NOT what you get. I received a cardboard box and a ziploc bag full of loose pieces, but it definitely does not look like I have as many pieces as in the picture (especially the carbon bonds). If I'm lucky, I'd say have maybe 1/3 as many pieces. It's also quite disappointing to find that I get a piece of cardboard in lieu of that green plastic case. If you want to buy this kit, find it somewhere else because it seems like it would be a great kit if all the pieces were actually there. As it is, I'm lucky if I can form just one isomer of octane.

Easy to put together, came in a reasonable time frame, just what I needed for class! Ref: College Sophomore Orgo I

First off, there are two versions of the Darling kit: the one pictured with the hard green box and a LOT of pieces, and a miniature kit in a cardboard box with 10 Carbons. I wanted the hard green box with more pieces, and I saw the picture and ordered it. What I received was the cardboard box. The worst part is, the box does not even fold together correctly. If you want the smaller kit, order now. If not, look elsewhere.

did not order this

Very disappointing! No green box to hold the pieces. I find it dishonest to show a picture on the product page that is not the actual product. I have been an customer for a long time and order lots of items, never have I been so misled as this order that my lab book I bought here too. I have always blindly trusted Sellers, you should be ashamed. I hope you enjoyed cheating a poor college student out of money.

The balls and sticks are sometimes hard to link together, but overall they're invaluable for going through organic chemistry. I am jelly of the wooden models. If I were to do it again I would go for the wooden set.
